Please amend the following claims:

which comprises: a matrix containing a negative charged polymer [selected from the group] consisting of sodium hyaluronate [polysulfated glucosoglycans, glucosaminoglycans, mucopolysaccharides, and mixtures thereof and having an average molecular weight between about 650,000 and 800,000] blended with a nonionic polymer, wherein the molar ratio of the negative charged polymer to the nonionic polymer is 1:0.5 to 4 and the negative charged polymer is present in amounts of about 2.0% to about 3.5% by weight of the resulting composition, and wherein the composition is storage stable and is capable of being topically administered to an animal.

which comprises: therapeutically effective amounts of an active NSAID drug dispersed within a matrix containing a negative charged polymer consisting of sodium hyaluronate [having an average molecular weight between about 650,000 and 800,000] blended with a nonionic polymer, wherein the molar ratio of the charged polymer to the nonionic polymer is 1:0.5 to 4 and the negative charged polymer is present in amounts of about 2.0% to about 3.0% by weight of the resulting composition, and wherein the composition is storage stable and transdermally delivers said therapeutically effective amounts of the NSAID drug.
